

Configure your Email Client

Configure Outlook 2007 to send email using a Vodafone connection

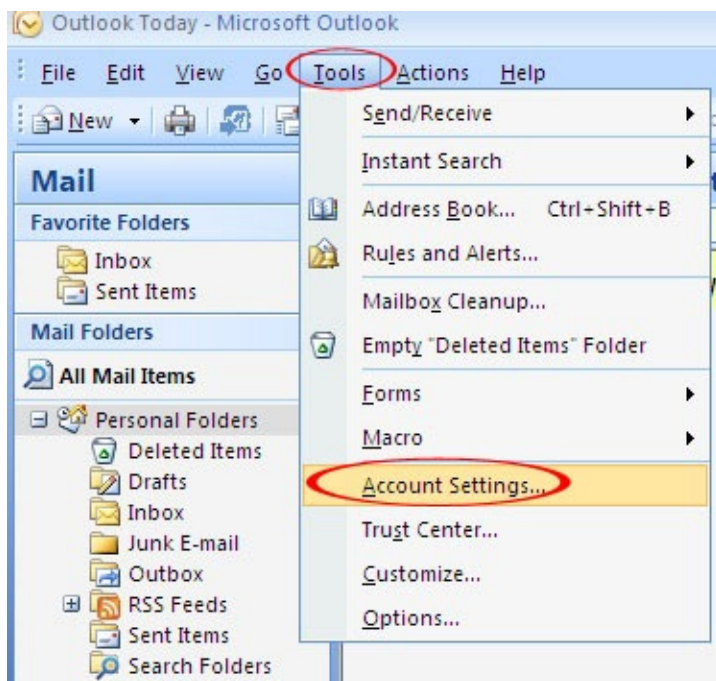

This tutorial covers how to edit an existing email account in **Outlook 2007** so it can be used on a Vodafone Internet connection.

If you use an email address from any other Internet Service Provider (e.g. eircom, UTV, NTL etc.) all you need to change in order to be able to send emails is the outgoing mail server (SMTP) address.

Just follow the steps below:

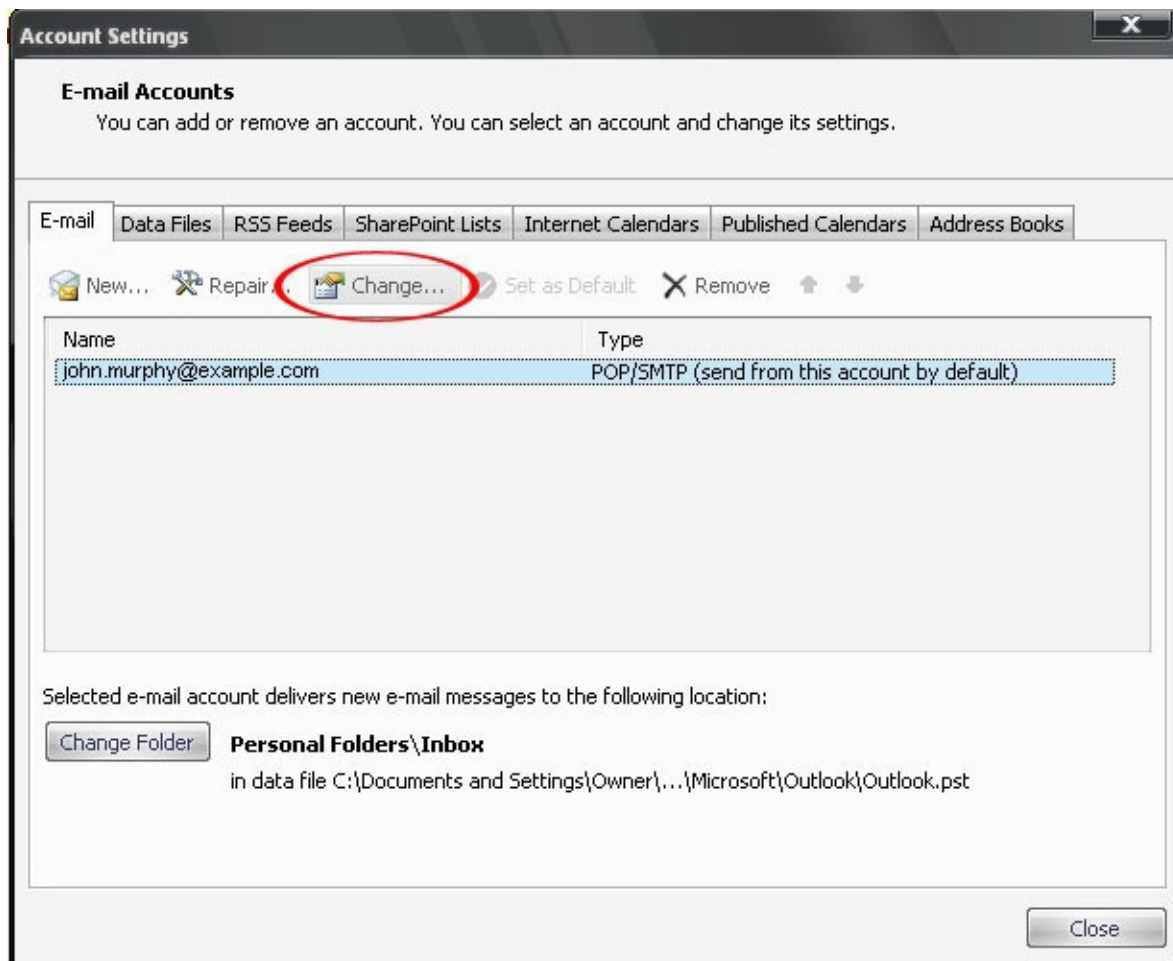

Open **Outlook 2007**

On the **Toolbar**, click **Tools** and select **Accounts Settings...** from the menu.

The **E-mail Accounts** window opens.

Highlight the account you'd like to edit and click **Change...**

Change E-mail Account screen:

Server Information:

The only setting that you need to change is the outgoing mail server in order to send emails using a Vodafone connection. If you can receive emails without any issue then do not change the incoming mail server.

Delete your existing outgoing mail server address and use the following setting instead:

Outgoing mail server (SMTP) = **mail.vodafone.ie**

Change E-mail Account

Internet E-mail Settings
Each of these settings are required to get your e-mail account working.

User Information
Your Name: John Murphy
E-mail Address: john.murphy@example.com

Server Information
Account Type: POP3
Incoming mail server: mail.example.com
Outgoing mail server (SMTP): mail.vodafone.ie

Logon Information
User Name: john.murphy
Password: *****
☒ Remember password
☐ Require logon using Secure Password Authentication (SPA)

Test Account Settings
After filling out the information on this screen, we recommend you test your account by clicking the button below. (Requires network connection)
Test Account Settings ...

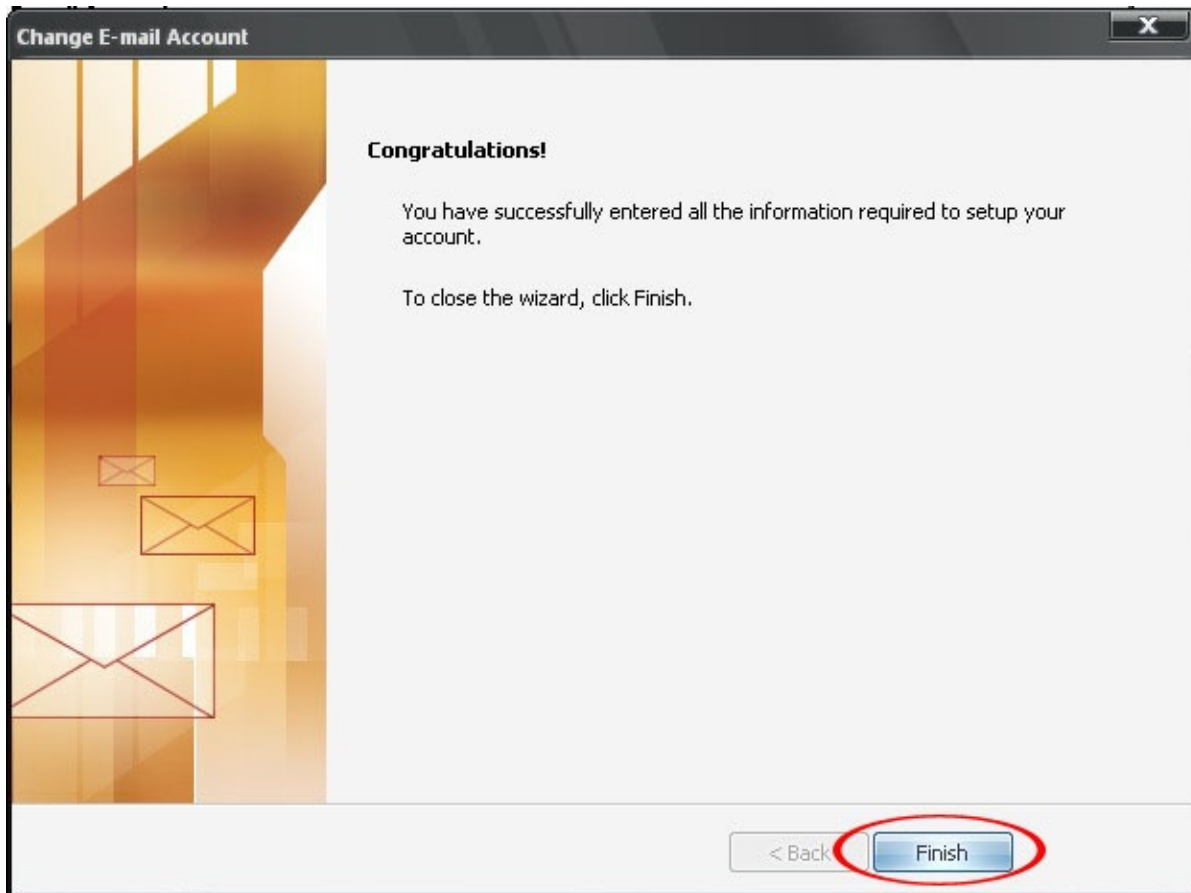

More Settings ...

< Back Next > Cancel

Click **Next** to continue.

Click **Finish** to complete the wizard.

Close and then re-open **Outlook 2007**.

You should now be able to send emails using your Vodafone Internet connection . However, if you have mail(s) in your Outbox that you are still not able to send:

Copy the contents into a new blank mail and attempt to send.

If successful, simply delete the troublesome mail from your Outbox.
